

Spiral Tutorials

Supplemental Math Tutoring
With Miss. Cachat
Summer 2017
June 19 - August 18
Tuesdays & Thursdays

Learning math is like a spiral. We start our math practice on a foundation of very few, basic concepts, and as we expand our knowledge we revisit these concepts at higher and more complex levels.

Spiral Tutorials uses *Math in Focus* materials to enrich and improve the math skills of students in first through eighth grade. *Math in Focus* utilizes the Singapore Math approach. This method relies on multiple models of demonstrating math knowledge, with the belief that if many models are offered to a student, at least one of the models will prove to be a comfortable fit for each student.

Cost:

First Through Third Grade

\$20 per half hour

\$30 per hour

Fourth Through Sixth Grade

\$25 per half hour

\$40 per hour

Seventh and Eighth Grade

\$30 per half hour

\$50 per hour

Key Concepts Covered

Addition

Subtraction

Number Bonds

Number Lines

Addition and Subtraction with Place Value Charts

Addition and Subtraction Bar Models
Graphs

Estimation

Factors and Multiples

Multiplication

Division

Multiplication and Division with Bar Models

Fractions

Decimals

Area and Perimeter

Lines and Angles

Because of the short schedule that summer tutoring affords, students need to come to tutoring willingly and prepared. There will be practice work that students need to complete between sessions. If a session is going to be missed, it needs to be communicated to the tutor at least 24 hours in advance.

**Students in seventh and eighth grade will be accepted only upon evaluation*
